# 1. INTRODUCTION

## About OCR

OCR (Optical Character Recognition) is the technology that allows you to transform images (e.g., images scanned from paper documents) into editable text-based computer files.

## About Asprise OCR SDK

Embedded a high performance OCR engine, Asprise OCR SDK is OCR software development kit that can be used with VB, VB.NET, VC++, VC.NET, C#, Java, .Net, Borland C, Delphi, etc.

## Features of Asprise OCR

An incomplete list of features offered by Asprise OCR:

### 1. Highest Level of Accuracy

Asprise OCR can easily recognize difficult documents of poor image quality;

### 2. Excellent Format Retention

Text layouts on the input documents are preserved;

### 3. High Speed

Asprise OCR uses optimized OCR engine to perform excellent recognition in very short time;

### 4. Ease of Use

We strive to make the developer's life easier. Complex parameter configurations are removed from Asprise OCR SDK. You only have to supply the image document. Asprise OCR can intelligently determines the best setting internally.

### 5. Barcode Recognition

Beside characters (letters and numbers), Asprise OCR can recognize almost every kind of barcode. You can choose to recognize barcode or characters or both.

## **Components of Asprise OCR SDK**

AspriseOCR SDK comprises two main essential components:

- A set of library files, including the dll files, lib files, and header files.
- one sample application in a particular language/framework.

## 2. ASPRISE OCR SDK INSTALLATION

In order to use Asprise OCR funtions, you have to install Asprise OCR SDK correctly.

Installing Asprise OCR SDK compries of the following steps:

- 1) Download Asprise OCR SDK from <http://www.asprise.com/product/ocr>. You can choose the SDK matching your desired programing language.
- 2) Unzip the SDK to a directory. From now on, the unzipped directory is referred to as the “[**ocr root**]” directory of the Asprise OCR SDK.
- 3) Copy the three dll files from the [**ocr root**]\\AspriseOCRLib folder to your operating system directory, eg. [C:\\Windows](C:\Windows).
- 4) Validate your installation by double click [**ocr root**]\\SetupCheck.exe. The result will be displayed.

Now, you have successfully installed Asprise OCR SDK for your desired programming lanuages.

### **3. DEVELOPMENT ENVIRONMENT SETUP**

This section explains software development environment setup for each programming language supported.

#### **Visual Basic**

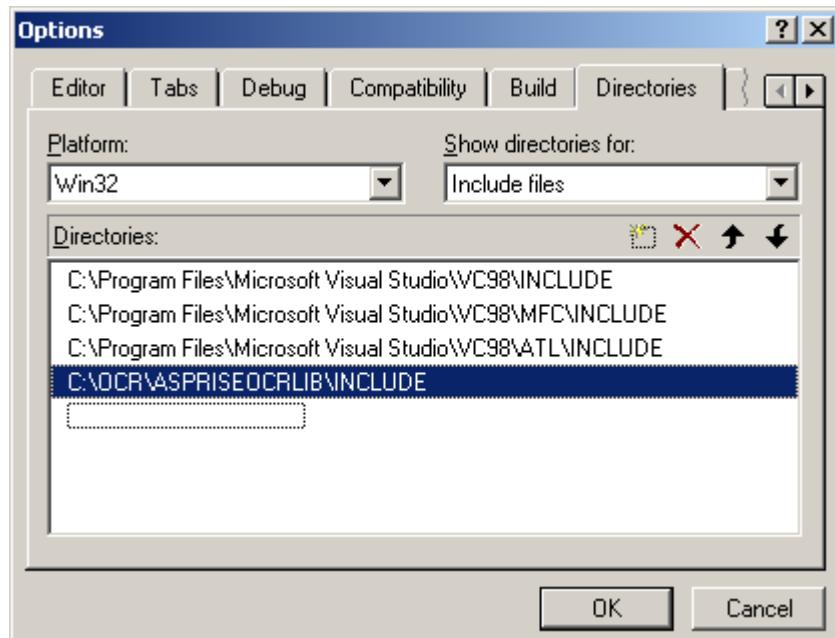

[No particular environment setup is required. ]

#### **Visual Basic.NET**

[No particular environment setup is required. ]

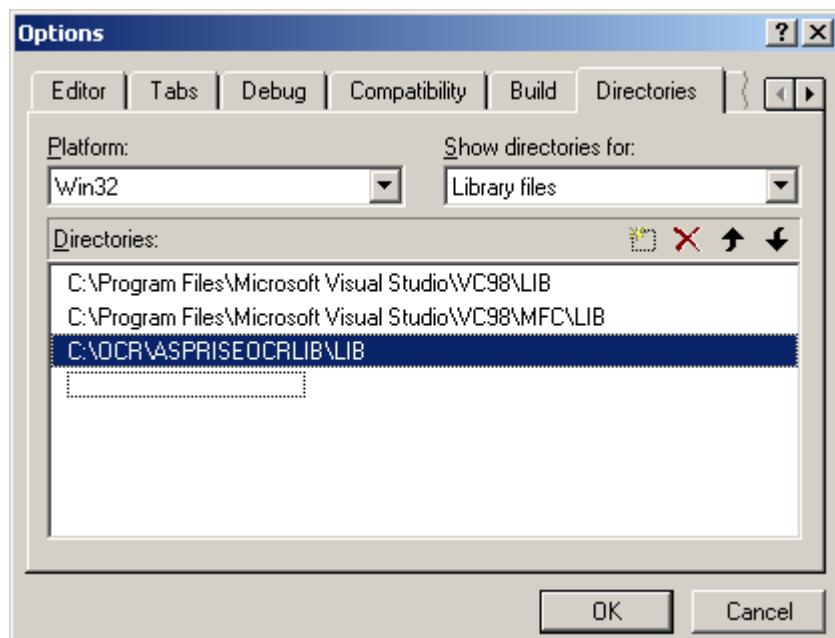

## Visual C++ & Borland C++ Builder

**Step 1:** Add **[ocr root]\AspriseOCRLib\include** folder into your IDE's include path. For VC++ IDE, click the menu **Tools -> Options**, and select **Directories** tab as shown below:

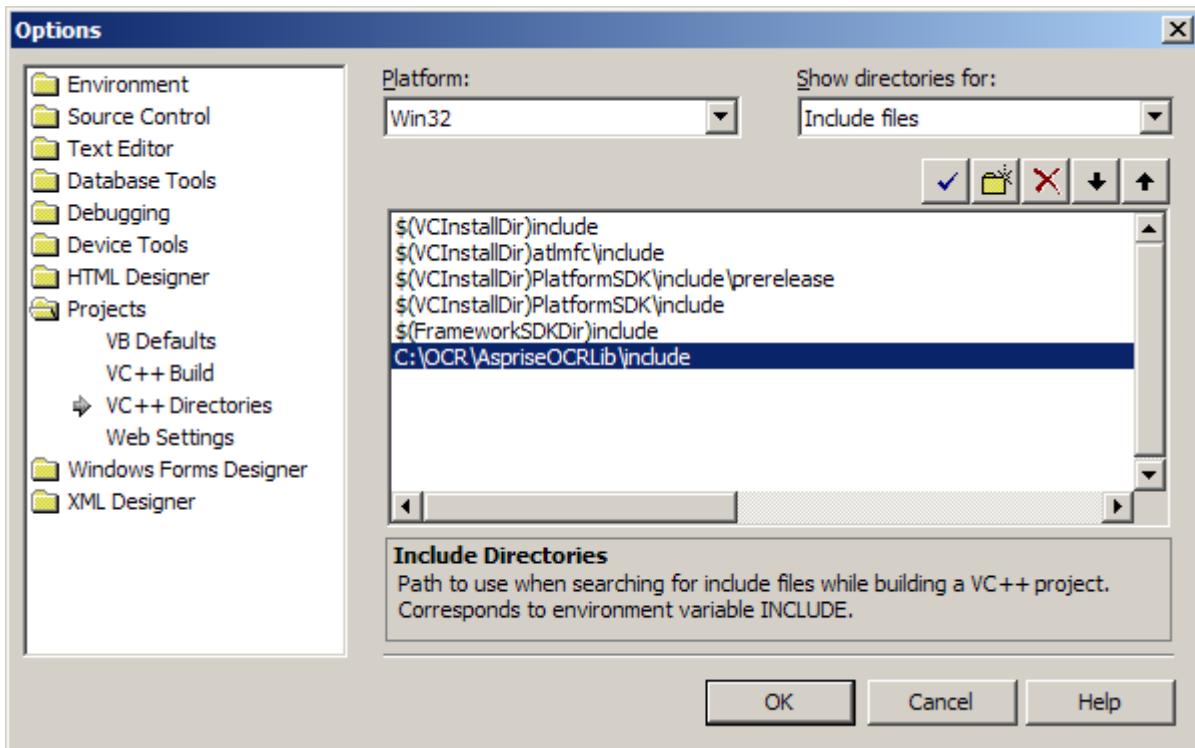

In above sample, the [ocr root] directory is [C:\OCR](#).

**Step 2:** Add **[ocr root]\AspriseOCRLib\lib** to your IDE's library directory. The figure below shows the VC++ setting:

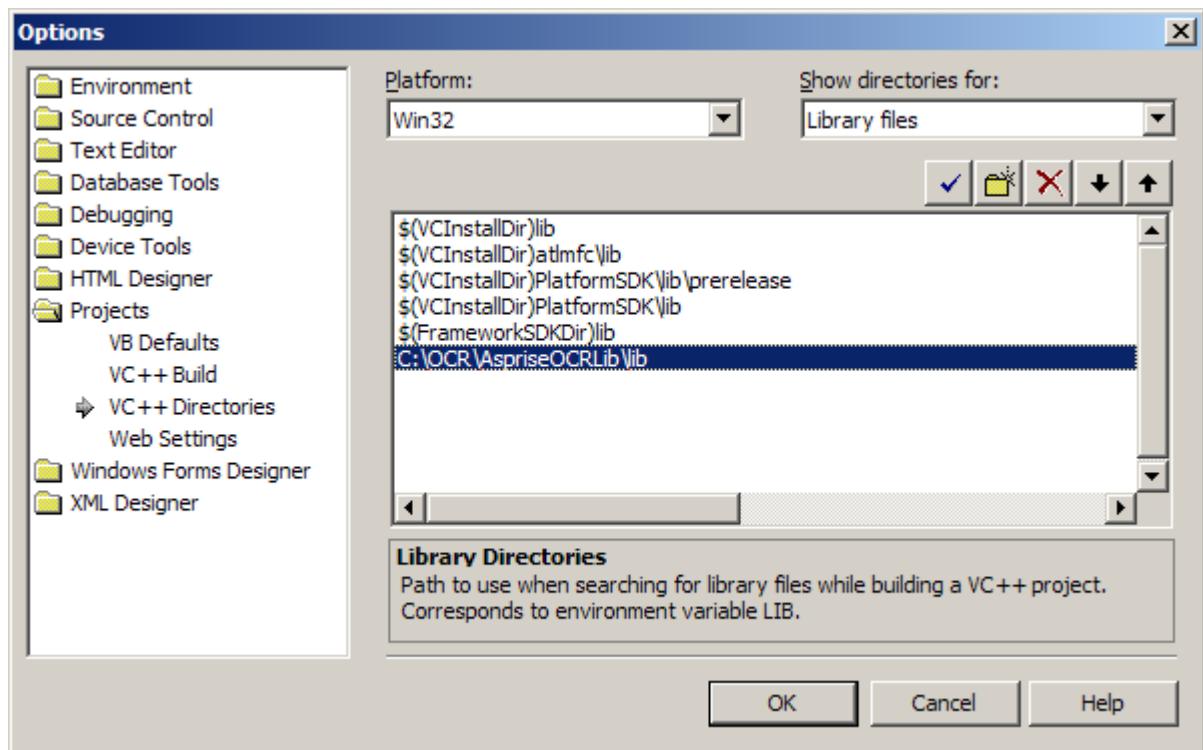

## Visual C++.NET

**Step 1:** Add **[ocr root]\AspriseOCRLib\include** folder into your IDE's include path. For VC++ .NET IDE, click the menu **Tools -> Options**, and select **Projects -> VC++ directories** in the left panel as shown below:

In above sample, the [ocr root] directory is [C:\OCR](#).

**Step 2:** Add **[ocr root]\AspriseOCRLib\lib** to your IDE's library directory. The figure below shows the VC++ .NET setting:

## .NET, C#

[No particular environment setup is required. ]

## 4. INTRODUCTION TO ASPRISE OCR APIs

This section explains all the functions that you can use to perform various OCR tasks.

Asprise OCR exposes the following functions that enable you to perform OCR:

### [string] **OCR([string] imagePath, [int] imageFileType)**

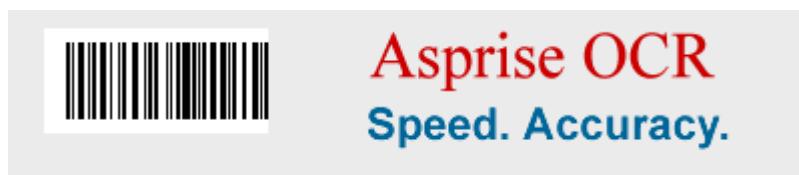

Note that [string] and [int] are string type and 32-bit integer type, which vary across different languages.

This function performs OCR on the specified image and returns the text recognized as a string. You pass the file path to the image to be recognized in the first argument and the image file type in the second argument. If you are unsure about the image file type or you want Asprise OCR detect it automatically, you can simply put '**-1**' in the second argument. Asprise OCR supports a wide range of image types. Image file types supported are listed in the table below. However, usually, you can pass image type as '**-1**' to let the system detect the image type automatically.

<b>imageFileType (int) [Hex values]</b>	<b>File Extensions</b>	<b>Remarks</b>
0x0420	.bmp	Windows bitmap
0x0421	.cut	Dr. Halo Cut File
0x0422	.doom	
0x0424	.ico	Icons
0x0425	.jpg, .jpeg	Jpeg
0x0426	.lbt	Interlaced bitmap
0x0427	.pcd	PhotoCD
0x0428	.pcx	
0x0429	.pic	PIC
0x042A	.png	Portable Network Graphics
0x042B	.pnm, .pbm	PNM
0x042C	.sgi	Silicon Graphics
0x042D	.tga	Targa

<b>imageFileType (int) [Hex values]</b>	<b>File Extensions</b>	<b>Remarks</b>
0x042E	.tif, .tiff	Tiff
0x042F	.chead	CHEAD
0x0430	.raw	RAW
0x0431	.mdl	Half life model
0x0432	.wal	Quake 2
0x0434	.lif	Homeworld file
0x0435	.mng	Mng animation
0x0435	.jng	JNG
0x0436	.gif	GIF
0x0437	.dds	DDS
0x0438	.dcx	DCX
0x0439	.psd	Photosh
0x043A	.exif	EXIF
0x043B	.psp	PSP
0x043C	.pix	PIX
0x043D	.pxr	PXR
0x043E	.xpm	XPM
-1	.*	System auto detect.

For example, for the following image: ([C:\ocr.gif](#)): [This image is available at **[ocr root]\sampleImages**]

Function call: **OCR("C:\\ocr.gif", -1)** returns the following text:

```
[123456789012]
Asprise OCR
Speed. Accuracy.
```

Note that '**[123456789012]**' represents the bar code detected. The content of the barcode is '**123456789012**'.

## [string] OCRpart([string] imagePath, [int] fileType, [int] startX, [int] startY, [int] width, [int] height)

Performs OCR on part of the image only. The coordinate of the upper left corner of the area to be OCRed is (**startX**, **startY**). The width and height of this area is **width** and **height**, respectively.

For example, function call OCR("C:\ocr.gif", -1, 0, 0, 300, 85) returns the following:

```
[123456789012]
Asprise C
Speed. Acc
```

Note that the image size for C:\ocr.gif is (400, 85).

## [string] OCRBarCodes([string] imagePath, [int] fileType)

This function performs OCR on the given image and returns all the bar codes. If there is more than one bar code, each bar code is separated with a line break ('\r\n').

Eg.

OCRBarCodes("C:\ocr.gif", -1) returns:

```
123456789012
```

## [string] OCRpartBarCodes([string] imagePath, [int] fileType, [int] startX, [int] startY, [int] width, [int] height)

This function performs OCR on the specified part of the given images and returns all the bar codes detected. If there is more than one bar code, each bar code is separated with a line break ('\r\n').

Eg.

OCRpartBarCodes("C:\ocr.gif", -1, 0, 0, 200, 80) returns:

```
123456789012
```

## Subimages/Pages

Some image files may contain multiple subimages or pages, for example, TIFF files. In this case, Asprise OCR performs OCR on all the subimages/pages and returns all the text recognized. Text recognized from different pages are separated with '**\r\n\* \* \*\r\n**'.

## 5. OCR PROGRAMMING WITH VISUAL BASIC

OCR programming with Visual Basic comprises of two steps:

- 1) Declared the exposed functions by Asprise OCR;
- 2) Call these functions to perform your desired OCR tasks.

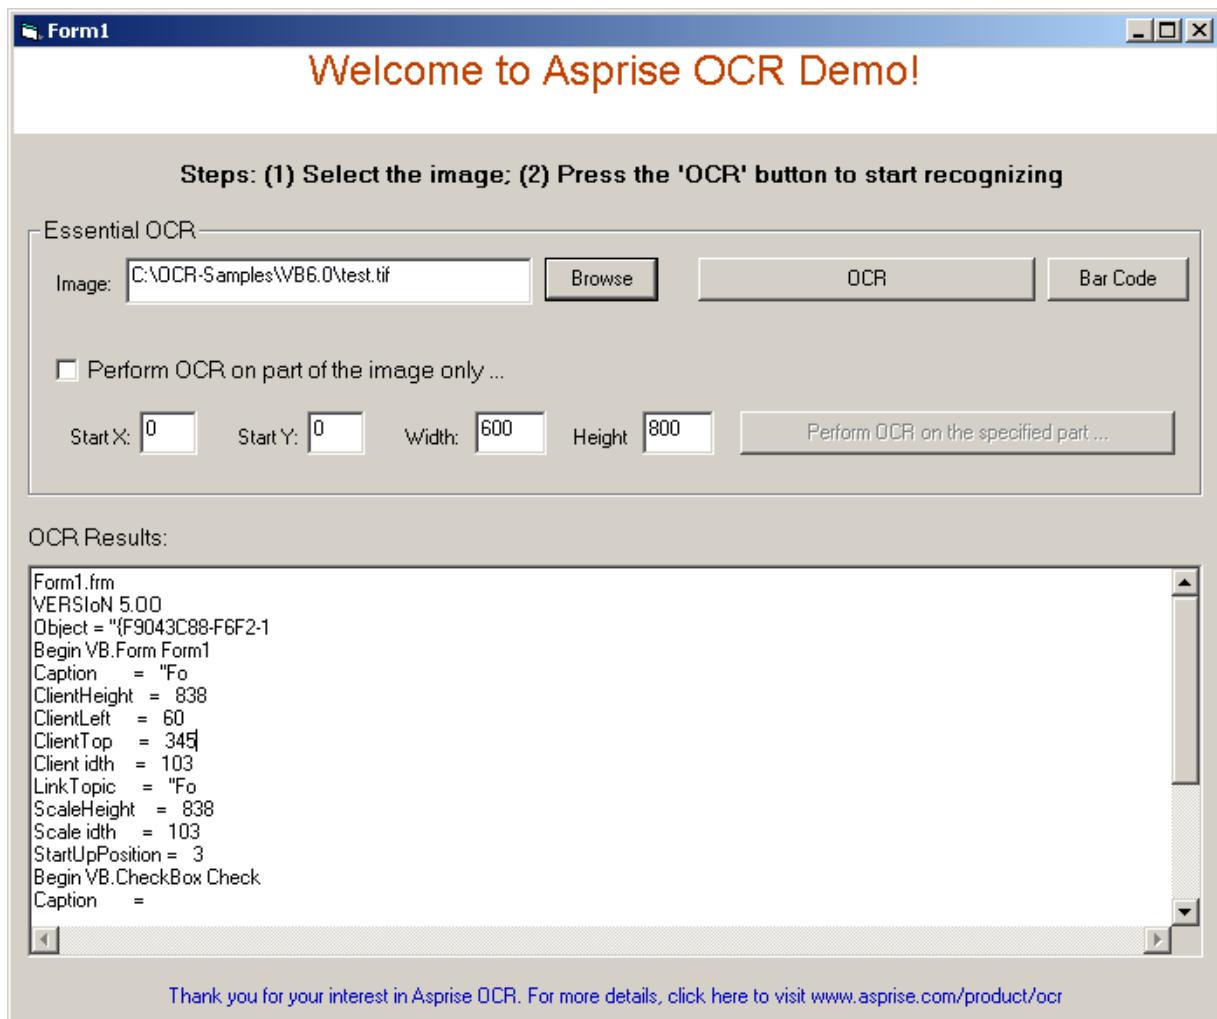

First, you need to declare the following functions exposed from the dll:

```
1.Private Declare Function OCR Lib "AspriseOCR.dll" (ByVal file As String,  
    ByVal imageType As Long) As String  
2.Private Declare Function OCRBarCodes Lib "AspriseOCR.dll" (ByVal file As  
    String, ByVal imageType As Long) As String  
3.Private Declare Function OCRpart Lib "AspriseOCR.dll" (ByVal file As  
    String, ByVal imageType As Long, ByVal startX As Long, ByVal startY As  
    Long, ByVal width As Long, ByVal height As Long) As String
```

Then you can start to call these functions:

```
1.Private Sub Command2_Click()  
2.    Dim ret As String  
3.    ret = OCR("C:\\ocr.gif", -1)  
4.End Sub
```

The code below shows a completed VB OCR demo application as shown in the figure.

#### Code listing:

```
1.VERSION 5.00
2.Object = "{F9043C88-F6F2-101A-A3C9-08002B2F49FB}#1.2#0"; "COMDLG32.OCX"
3.Begin VB.Form Form1
4.    Caption      =   "Form1"
5.    ClientHeight =   8385
6.    ClientLeft   =   60
7.    ClientTop    =   345
8.    ClientWidth  =  10335
9.    LinkTopic    =   "Form1"
10.   ScaleHeight  =   8385
11.   ScaleWidth   =  10335

## 6. OCR PROGRAMMING WITH VISUAL BASIC.NET

OCR programming with Visual Basic.NET comprises of two steps:

- 1) Declared the exposed functions by Asprise OCR;
- 2) Call these functions to perform your desired OCR tasks.

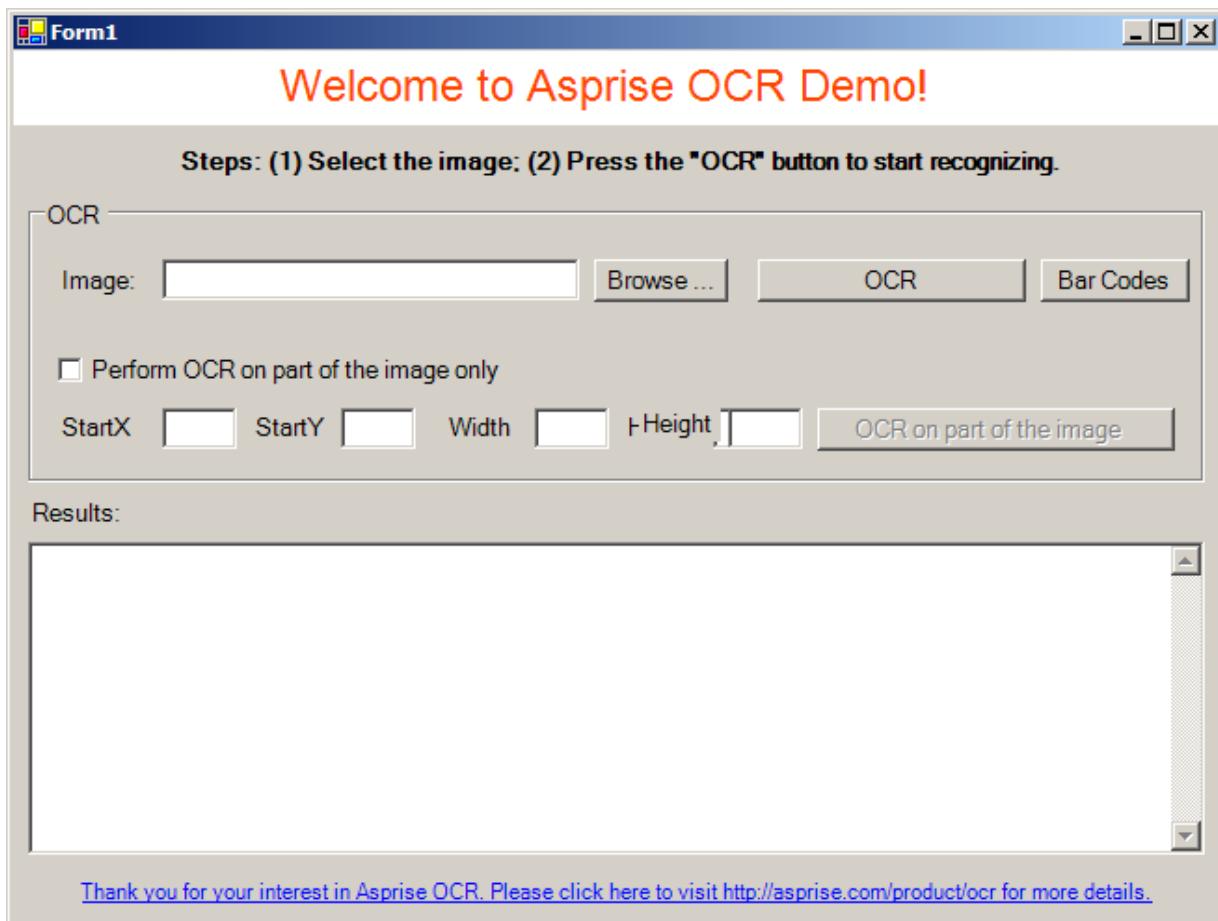

First, you need declare the following functions exposed from the dll:

```
1.    Declare Function OCR Lib "AspriseOCR.dll" (ByVal file As String,  
        ByVal type As Integer) As String  
2.    Declare Function OCRBarCodes Lib "AspriseOCR.dll" (ByVal file As  
        String, ByVal type As Integer) As String  
3.    Declare Function OCRpart Lib "AspriseOCR.dll" (ByVal file As String,  
        ByVal type As Integer, ByVal startX As Integer, ByVal startY As Integer,  
        ByVal width As Integer, ByVal height As Integer) As String  
4.    Declare Function OCRpartBarCodes Lib "AspriseOCR.dll" (ByVal file As  
        String, ByVal type As Integer, ByVal startX As Integer, ByVal startY As  
        Integer, ByVal width As Integer, ByVal height As Integer) As String
```

Now, you can make calls to these functions. eg.

**OCR("C:\\ocr.gif", -1)**

The code listed below creates a OCR utility application as shown in the figure.

```
1. Public Class Form1
2.
3.     Declare Function OCR Lib "AspriseOCR.dll" (ByVal file As String,
   ByVal type As Integer) As String
4.     Declare Function OCRBarCodes Lib "AspriseOCR.dll" (ByVal file As
   String, ByVal type As Integer) As String
5.     Declare Function OCRpart Lib "AspriseOCR.dll" (ByVal file As String,
   ByVal type As Integer, ByVal startX As Integer, ByVal startY As Integer,
   ByVal width As Integer, ByVal height As Integer) As String
6.     Declare Function OCRpartBarCodes Lib "AspriseOCR.dll" (ByVal file As
   String, ByVal type As Integer, ByVal startX As Integer, ByVal startY As
   Integer, ByVal width As Integer, ByVal height As Integer) As String
7.
8.     Private Sub CheckBox1_CheckedChanged(ByVal sender As System.Object,
   ByVal e As System.EventArgs) Handles CheckBox1.CheckedChanged
9.         If CheckBox1.Checked Then
10.             buttonOCRPart.Enabled = True
11.         Else
12.             buttonOCRPart.Enabled = False
13.         End If
14.     End Sub
15.
16.     Private Sub buttonBrowse_Click(ByVal sender As System.Object, ByVal
   e As System.EventArgs) Handles buttonBrowse.Click
17.         OpenFileDialog1.InitialDirectory = Application.StartupPath
18.         OpenFileDialog1.ShowDialog()
```

```

19.     textImage.Text = OpenFileDialog1.FileName
20.
21. End Sub
22.
23. Private Sub buttonOCR_Click(ByVal sender As System.Object, ByVal e
   As System.EventArgs) Handles buttonOCR.Click
24.     textResults.Text = OCR(textImage.Text, -1)
25. End Sub
26.
27. Private Sub buttonBarcodes_Click(ByVal sender As System.Object,
   ByVal e As System.EventArgs) Handles buttonBarcodes.Click
28.     textResults.Text = OCRBarCodes(textImage.Text, -1)
29. End Sub
30.
31. Private Sub buttonOCRPart_Click(ByVal sender As System.Object, ByVal
   e As System.EventArgs) Handles buttonOCRPart.Click
32.     Dim startX As Int32
33.     Dim startY As Int32
34.     Dim width As Int32
35.     Dim height As Int32
36.
37.     On Error Resume Next
38.
39.     startX = System.Convert.ToInt32(textStartX.Text)
40.     startY = System.Convert.ToInt32(textStartY.Text)
41.     width = System.Convert.ToInt32(textWidth.Text)
42.     height = System.Convert.ToInt32(textHeight.Text)
43.
44.     textResults.Text = OCRpart(textImage.Text, -1, startX, startY,
   width, height)
45.
46. End Sub
47.
48. Private Sub GroupBox1_Enter(ByVal sender As System.Object, ByVal e
   As System.EventArgs) Handles GroupBox1.Enter
49.     buttonOCRPart.Enabled = False
50.
51. End Sub
52.
53. Private Sub LinkLabel1_LinkClicked(ByVal sender As System.Object,
   ByVal e As System.Windows.Forms.LinkLabelLinkClickedEventArgs) Handles
   LinkLabel1.LinkClicked
54.     System.Diagnostics.Process.Start("http://aspire.com/product/ocr
   ")
55. End Sub
56.End Class

```

The complete Visual Basic.NET project is located at **[ocr root]\sampleApp**.

#### **IMPORTANT NOTICE FOR THE SAMPLE APPLICATION:**

This binary executable was built using Visual Studio .NET 2003. If you are using a different version of Visual Studio .NET, you should rebuild the binary executable.

## 7. OCR PROGRAMMING WITH VISUAL C++/BORLAND C++/C

Before you can start OCR programming with C or C++, you need to set up your IDE first (see section 3).

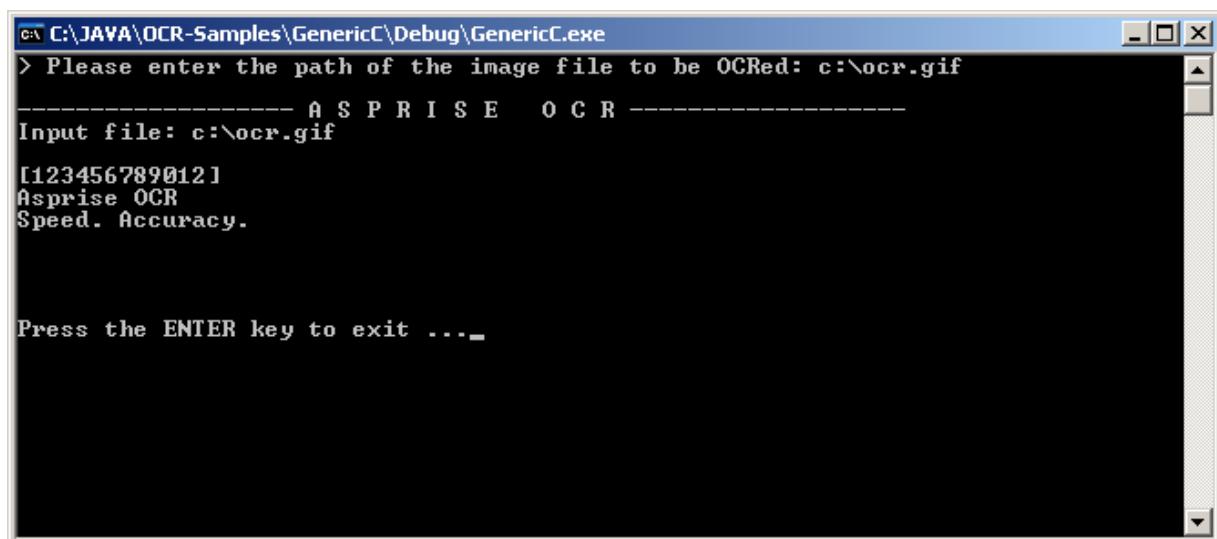

The following code creates a basic program to perform OCR:

```
1. #include <stdio.h>
2. #include "AspriseOCR.h"
3.
4.
5. /**
6.  * Returns the path of the image file to be OCRed.
7. */
8. char * getInputFile(int argc, char* argv[]);
9.
10.
11. /**
12.  * Program entry point.
13. */
14. int main(int argc, char* argv[])
15. {
16.     char *text = ""; // used to point to the OCR text recognized.
17.
18.
19.     /*-----
20.      | Gets the path of the image file to be OCRed.
21.      \-----*/
22.
23.     char *input = getInputFile(argc, argc);
24.
25.
26.     printf("\r\n----- A S P R I S E   O C R --- \r\n");
27.     printf("Input file: %s\r\n\r\n", input);
28.
29.
30.     /*-----
31.      | Performs the actual OCR.
32.      | The image path is specified in the first argument of the OCR
33.      | func.
34.      | The second argument is the type of the image. All supported
35.      | types
36.      | are defined in 'AspriseOCR.h'. Use IMAGE_TYPE_AUTO_DETECT to
37.      | let
38.      | the system to detect the image type automatically.
39.      \-----*/
40.
41.     /*-----
```

```

42.         | Prints out the OCR results.
43.         \-----*/ 
44.
45.         printf(text);
46.
47.         printf("\r\n\r\n\r\n\r\n\r\nPress the ENTER key to exit ...");
48.         getchar();
49.         return 0;
50.     }
51.
52.
53.
54. char * getInputFile(int argc, char* argv[]) {
55.     char* file;
56.
57.     if(argc == 2) // if the user specifies a file as the argument,
use it.
58.             return argv[1];
59.
60.     // otherwise, ask the user to input a file path.
61.
62.     file = (char *)calloc(sizeof(char), 200); // maximum 200
characters.
63.
64.     printf("> Please enter the path of the image file to be OCRed:
");
65.     scanf("%s", file);
66.     getchar(); // consumes the ENTER key.
67.
68.     return file;
69. }
```

The UI output:

## 8. OCR PROGRAMMING WITH C#, .NET

OCR programming with C# comprises of two steps:

- 1) Declared the exposed functions by Asprise OCR;
- 2) Call these functions to perform your desired OCR tasks.

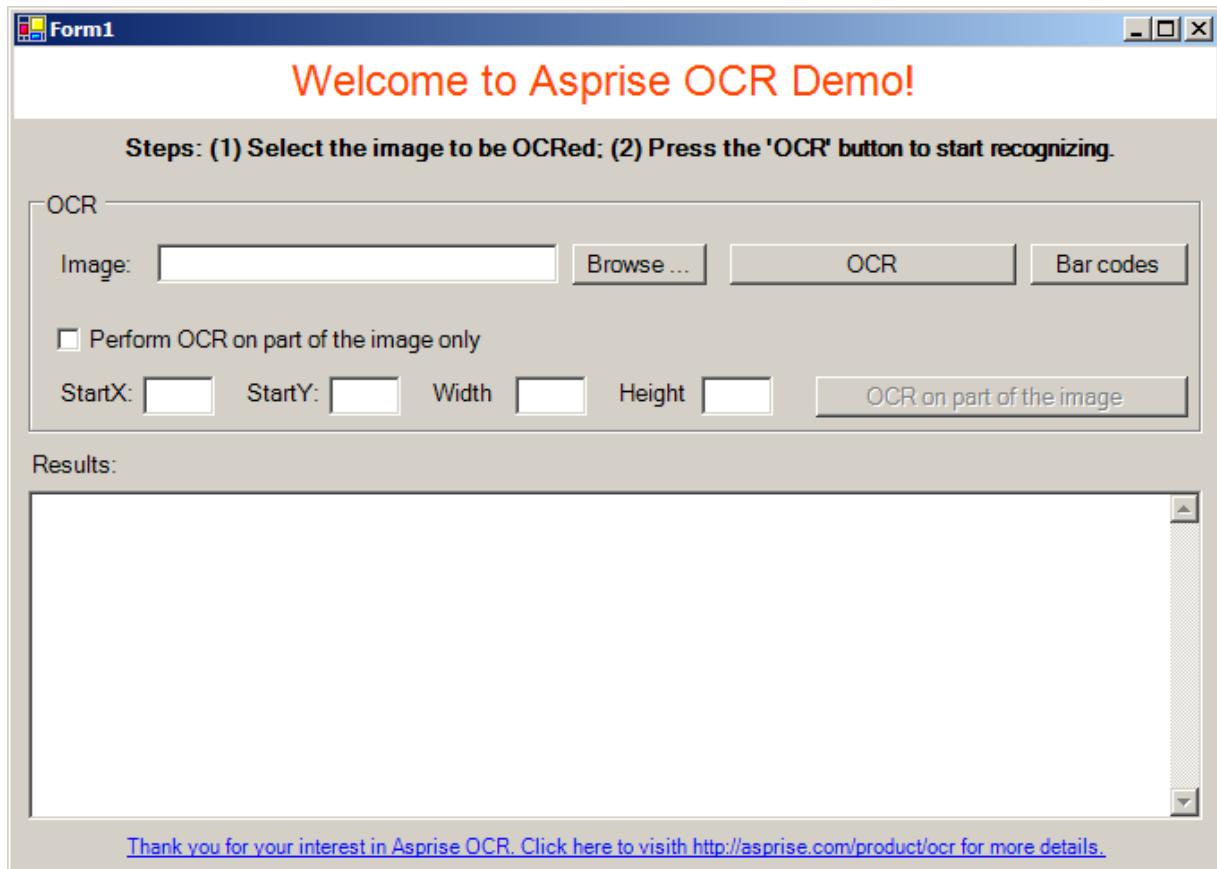

First, you need declare the following functions exposed from the dll:

```
1.      [DllImport("AspriseOCR.dll")]
2.      static extern string OCR(string file, int type);
3.
4.      [DllImport("AspriseOCR.dll")]
5.      static extern string OCRpart(string file, int type, int startX,
   int startY, int width, int height);
6.
7.      [DllImport("AspriseOCR.dll")]
8.      static extern string OCRBarCodes(string file, int type);
9.
10.     [DllImport("AspriseOCR.dll")]
11.     static extern string OCRpartBarCodes(string file, int type, int
   startX, int startY, int width, int height);
```

Then you can start to call these function. eg.

```
string result = OCR("C:\\ocr.gif", -1);
```

The following code listed creates a OCR application as shown in the figure.

```
1. #region Using directives
2.
3. using System;
4. using System.Collections.Generic;
5. using System.ComponentModel;
6. using System.Data;
7. using System.Drawing;
8. using System.Windows.Forms;
9. using System.Runtime.InteropServices;
10.
11.
12. #endregion
13.
14. namespace OCRSampleApp
15.{
16.     partial class Form1 : Form
17.     {
18.         [DllImport("AspriseOCR.dll")]
19.         static extern string OCR(string file, int type);
20.
21.         [DllImport("AspriseOCR.dll")]
22.         static extern string OCRpart(string file, int type, int startX,
23.             int startY, int width, int height);
24.
25.         [DllImport("AspriseOCR.dll")]
26.         static extern string OCRBarCodes(string file, int type);
27.         [DllImport("AspriseOCR.dll")]
28.
```

```

28.     static extern string OCRpartBarCodes(string file, int type, int
   startX, int startY, int width, int height);
29.
30.
31.     public Form1()
32.     {
33.         InitializeComponent();
34.         openFileDialog1.InitialDirectory = Application.StartupPath;
35.     }
36.
37.     private void groupBox1_Enter(object sender, EventArgs e)
38.     {
39.     }
40.
41.
42.     private void buttonBrowse_Click(object sender, EventArgs e)
43.     {
44.         DialogResult dr = openFileDialog1.ShowDialog(this);
45.         textImage.Text = openFileDialog1.FileName;
46.     }
47.
48.     private void checkBox1_CheckedChanged(object sender, EventArgs
e)
49.     {
50.         if (checkBox1.Checked)

68.         textResults.Text = result;
69.     }
70.
71.     private void buttonBarcode_Click(object sender, EventArgs e)
72.     {
73.         string result = OCRBarCodes(textImage.Text, -1);
74.         textResults.Text = result;
75.     }
76.
77.     private void buttonOCRPart_Click(object sender, EventArgs e)
78.     {
79.         int startX = 0;
80.         int startY = 0;
81.         int width = -1;
82.         int height = -1;
83.         try
84.         {
85.             startX = Convert.ToInt32(textStartX.Text);
86.             startY = Convert.ToInt32(textStartY.Text);
87.             width = Convert.ToInt32(textWidth.Text);

```

```
88.             height = Convert.ToInt32(textHeight.Text);
89.         }
90.         catch (Exception ex)
91.         {
92.             Console.WriteLine(ex.StackTrace);
93.         }
94.         String result = OCRpart(textImage.Text, -1, startX, startY,
width, height);
95.         textResults.Text = result;
96.     }
97.
98.     private void linkLabel1_LinkClicked(object sender,
LinkLabelLinkClickedEventArgs e)
99.     {
100.
101.         System.Diagnostics.Process.Start("http://asprise.com/pr
oduct/ocr");
102.
103.     }
104.
105. }
106.}
```

The complete C# project is available at **[ocr root]\sampleApp**.

#### **IMPORTANT NOTICE FOR THE SAMPLE APPLICATION:**

This binary executable was built using Visual Studio .NET 2003. If you are using a different version of Visual Studio .NET, you should rebuild the binary executable.

## 9. APPLICATION PACKAGING AND DISTRIBUTION

**WARNING:** Before you can distribute your Asprise OCR based programs to your clients/end users, you need to purchase a license from LAB Asprise! first. Visit this page to find how to order: <http://aspire.com/product/ocr>.

So you have successfully developed your applications with Asprise OCR. It's time to distribute your programs to the end users. Distributing Asprise OCR based applications is very easy.

You simply distribute the three dll files for Asprise OCR along with your own program files.

# **10. SUPPORT AND PROFESSIONAL SERVICES**

## **Support Web Site**

<http://www.asprise.com/product/ocr>

## **Basic Support**

Our team provides basic support for general Asprise OCR developers. Email your technical questions to [support@asprise.com](mailto:support@asprise.com)

**Advice:** You are strongly recommended to subscribe our premium support service in order to get your problems solved quickly.

## **Premium Support Services**

We provide you free up to 6 months' premium support services subscription with every license purchased. You may optionally extend premium support services after your subscription expires. More details will be included in the email sent to you when you purchase licenses.

## **Professional Services**

Our team are ready to help you to develop various applications, components. Please send your query to [info@asprise.com](mailto:info@asprise.com)

## **Sales Related, Business Opportunities**

Please direct your email to [sales@asprise.com](mailto:sales@asprise.com).
